UNIQUENESS

COMFORTABLE STEERING AND MOORING

To make it easy to handle, all Gallaxy models are equipped with two steering devices, in the cockpit and at the flybridge; there are two thrusters for mild mooring and a rear-view camera.

SAFETY

Gallaxy’s “sandwich” technology design provides unsinkability, thermo and sound insulation, and protects against vibrations. Special shockproof faceplates along the hull prevent damage when blow on the side or stranding occurs.

USABITY

Gallaxy’s exterior is made of parts specially developed for aggressive environments. Decks and floors are made of heavy duty composite materials that looks like natural ones, won’t be easily spoilt by corrosion and wear, and won’t need any special care and maintenance.

MODULAR DESIGN

Innovative design and engineering approach allow to increase Gallaxy in width and length using the same matrix and tools, easily re-develop the interior and combine or create additional cabins.

LARGE LIVING SPACE

Comfort for living and travel - open and spacious cabins with high ceilings and panoramic windows, full-sized and functional kitchen, bedrooms with queen size beds and lavatories with shower.

LOW SERVICE COSTS

Unique engineering solutions allow reduction of fuel consumption and maintenance costs, offering an incredible value for money.
